# PROFESSIONAL RADIATION PROTECTION TRAINING

Seibersdorf Academy is Austria's largest training center for radiation protection. We have more than 50 years of experience in teaching and training people working with ionizing radiation.

As well as an extensive training program for the civilian sectors of medicine, technology, and research, we also offer a special modular training system in radiation protection and emergency response for members of the military and emergency services, i.e. police, fire department, and rescue services. More than 30,000 emergency service members have been trained in Seibersdorf to date.

## OUR TEAM

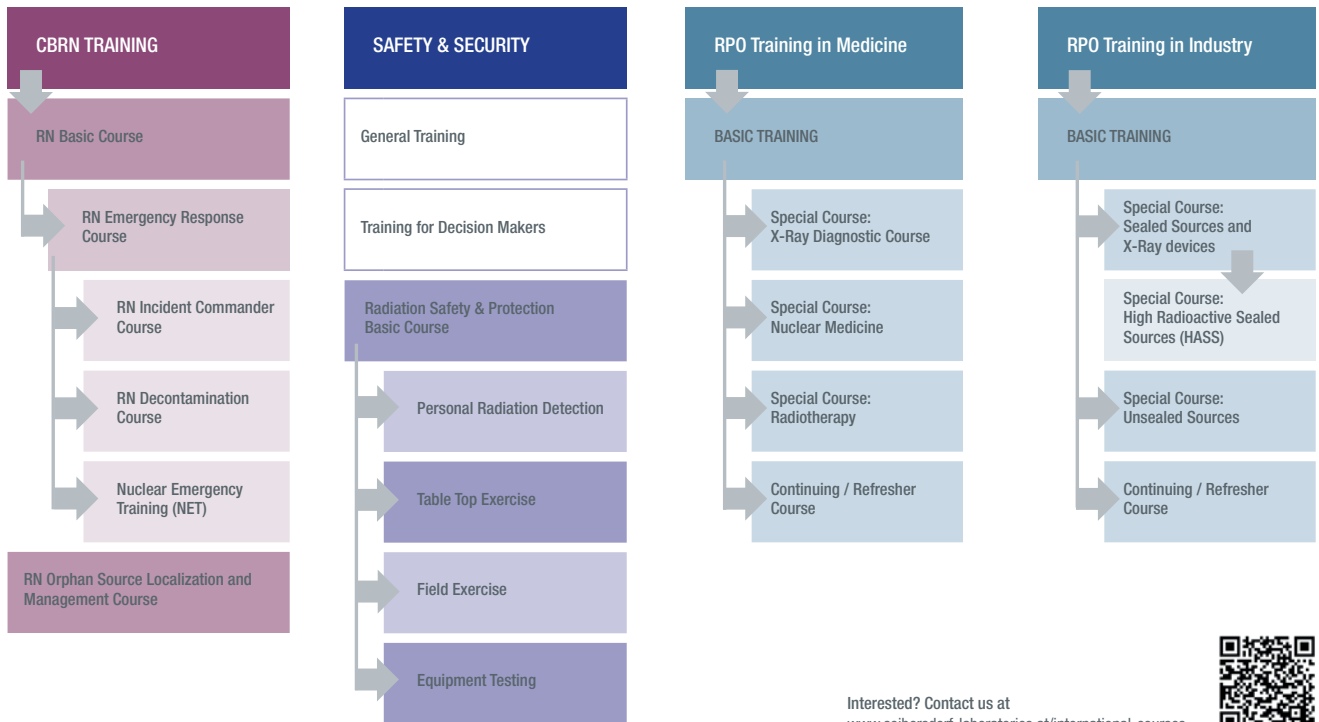

Our team consists of experts and lecturers. Their knowledge is based on many years of experience in hands-on radiation safety. Interdisciplinary cooperations provide a wide spectrum of expert knowledge, covering all aspects of radiation safety and security.

Practical exercises are included in all our courses, where tutors have the chance to actively engage with the course participants. The team of the Seibersdorf Academy offers different levels of knowledge transfer, starting with beginners' awareness training up to specialized expert briefings.

We enjoy making training a rewarding experience.

# OVERVIEW TRAINING PROGRAMME

## UNIQUE FACILITIES

Competent expertise and practical application are a trademark of training at the Seibersdorf Academy. The facilities support this goal by providing realistic training environments for sealed and unsealed sources as well as routine and emergency activities.

Highly unique are the facilities to exercise decontamination with short-lived radioactive substances, providing a real-life situation with all its challenges. A demonstration laboratory allows hands-on experience of basic properties like radiation qualities, shielding, etc.

Training at the facilities is complemented by a broad range of instruments and devices available as required.

## QUALITY STANDARDS

All radiation safety training offered by the Seibersdorf Academy is based on Austrian standards and regulations, further derived from internationally recognized standards, specifically the IAEA Basic Safety Standards (IAEA-BSS) and corresponding European Community regulations. The Seibersdorf Academy, certified according to ISO 9001 and ISO 29990, is fully recognized to offer training in line with these requirements.

The suite of emergency response training courses meets the requirements of intervention personnel to be able to work autonomously or in a team in case of a radiation incident. It provides the necessary expertise for safe work under emergency conditions, including the basics of communication, decontamination, measurement techniques and other relevant tasks. Realistic training under real-life conditions with the use of sealed sources is the main component of this course.
